**VERSION WITH MARKINGS TO SHOW AMENDMENTS MADE**

64.(amended) A process of making enhanced activated carbon having an increased capacity for adsorbing chlorine in potable water, comprising:

- a) contacting activated carbon with an aqueous solution of up to about 10% by weight of an enhancer comprising potassium iodide [an enhancing compound selected from the group consisting of potassium iodide, ammonium carbonate and ammonium sulfate]; and
- b) drying the activated carbon.

65.(amended) The process of Claim 1, wherein contacting is for a time sufficient to saturate the activated carbon with the [enhancing compound] enhancer.
